

Smarter Renovations, Bigger Profits

By Mannan Mishra, Lyn Wang, Suvass Ravala

UC Berkeley

What home features best improve Sale Price per Square Foot for Renovators?

UC Berkeley

Introduction

DATA CLEANING

Ensuring data sanity

UC Berkeley

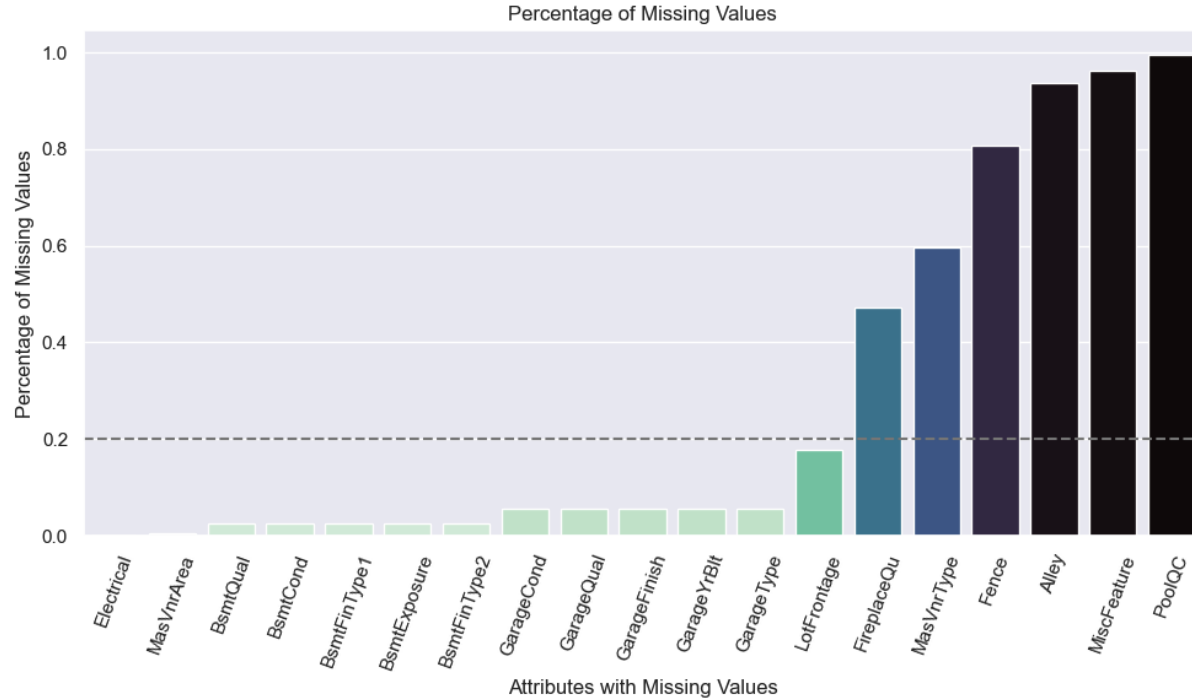

MISSING VALUES

Data Integrity

- Avoids data corruption

Lack of Value

- Only represent a small subset of population

FEATURE SELECTION

Working with Numeric and
Non-Numeric Data

UC Berkeley

Qualitative Attributes

Are categories informative?

- Check for concentration
- Check for difference among groups are statistically significant (ANOVA)

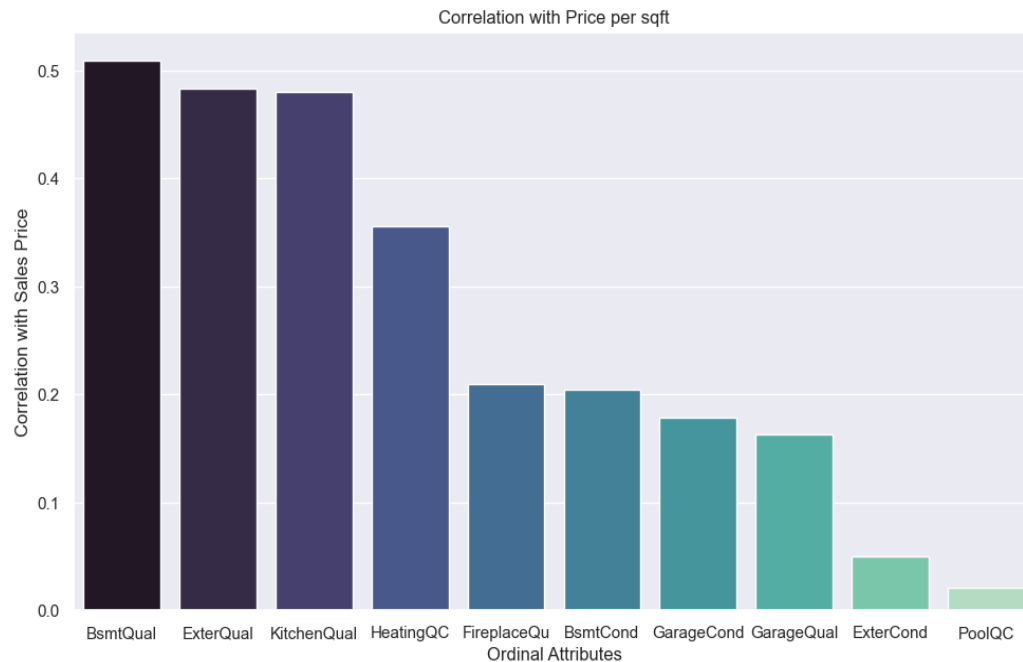

Quantifying Ordinal Data

Balanced Distribution +
Informative categories +
Correlation with price/sqft

**External Quality, Kitchen Quality and
Heating Quality**

Quantifying Non-Ordinal Data

Feature Importance (95%)

- Neighborhood
- Roof Style
- Exterior Material
- ... (8 in total)

Quantitative Attributes

Correlation with price/sqft

- Overall Quality leads with highest correlation

Removal of Collinear and Irrelevant Data

ML Models

- Used to verify our findings of quantitative data
- Four Models: Linear Regression, Random Forest, XGBoost, Gradient Descent
- Results: Overall Quality, Overall Condition, Garage Car Space were biggest factors

UNCOVERING PATTERNS

Deep-dive into the relationship
with sale price per sqft

UC Berkeley

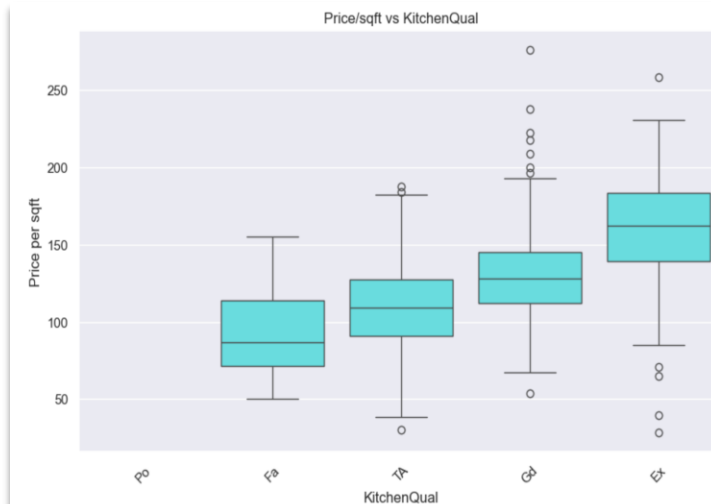

Qualitative – Neighborhoods

- Location greatly influences property value
- Takeaways:
 - Research Neighborhoods
 - Higher price/sqft – Luxury Amenities
 - Lower price/sqft – Cost effective design

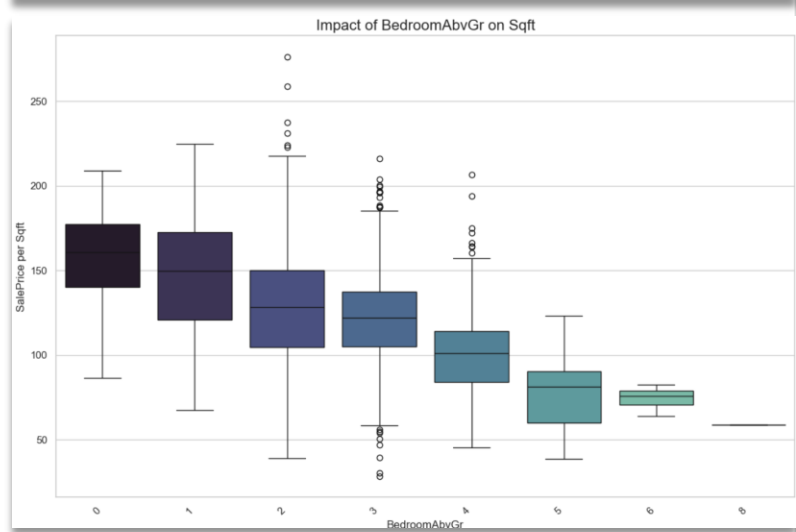

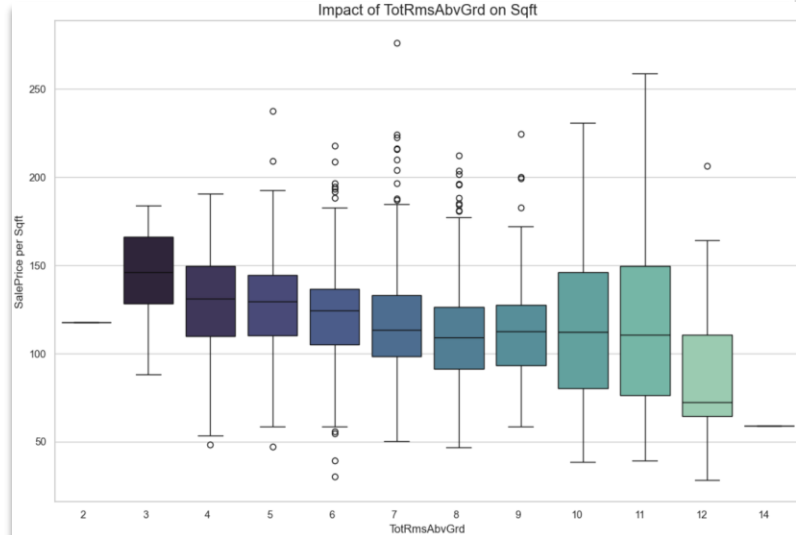

Qualitative – Kitchen & Exterior

- Excellent(Ex), Good(Go), Typical(TA), Fair(Fa), Poor(Po)
- Higher qualities exterior and kitchen = higher price/sqft
- Takeaways:
 - Improving exterior and kitchen quality is cost effective strategy to improve home value

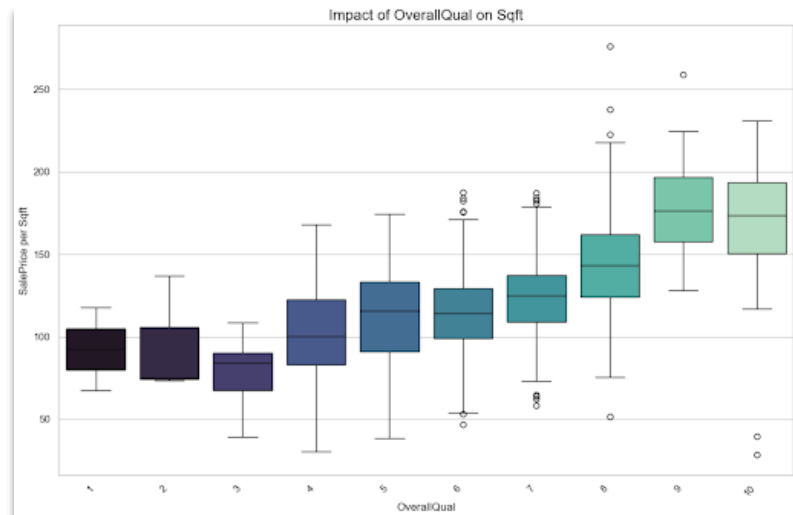

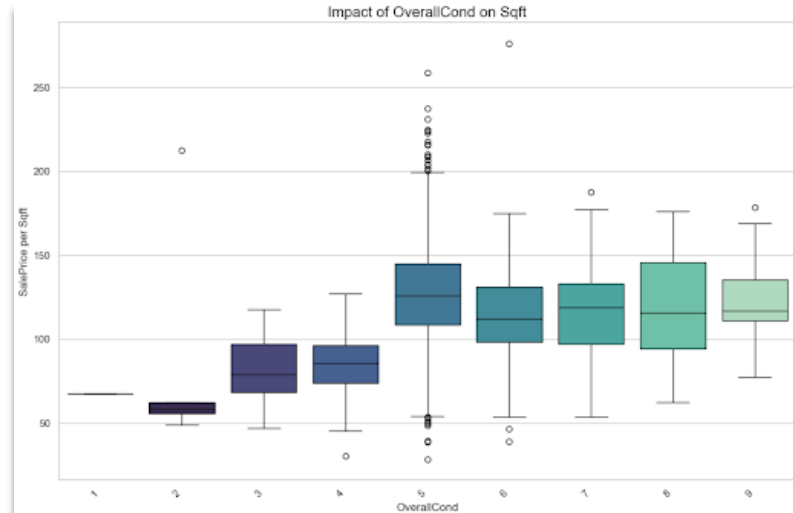

Quantitative – Rooms

- No clear trend in adding more above ground rooms
- Adding more bedrooms decreases price/sqft
- Takeaways:
 - Buyers prioritize comfort and functionality over house stats
 - Buyers prefer thoughtful designs

Quantitative – Condition and Quality

- Overall Quality and Condition of the House Greatly Increase price/sqft (Condition has diminishing returns after average rating)
- Takeaways:
 - Make house condition decent then focus on quality

Final Takeaways

- Prioritize Neighborhood Research
 - Developers should align their designs with neighborhood trends to maximize profitability
- Optimize Room and Bedroom Design
 - Developers need to focus on functionality and comfort of spaces rather than padding statistics
- Balance Condition and Quality Improvements
 - Improve house condition until reaching diminishing returns, then prioritize quality finishings to maximize profits.
